Summary

Backend-focused Software Engineer with 5 years of experience in the IT field, leading API development, system architecture design, and data engineering initiatives in healthcare and enterprise environments. Experienced in driving backend architecture decisions, database design, deployment automation, and cross-functional technical planning, translating business requirements into scalable and maintainable technical solutions. Strong background in Node.js (Express/Nest), PostgreSQL, MongoDB, and cloud-based deployments.

Work Experience

Part Time Data Engineer
MEDVA
09/2024 - Present

- Designed ETL services consolidating data from 4 operational systems into BigQuery-powered reporting dashboards.
- Restructured BigQuery datasets to improve reporting performance and reduce redundant storage costs.
- Contributed to planning and cost analysis of scalable data warehouse architecture.
- Developed automation workflows using Microsoft Power Automate, reducing manual administrative tasks and improving operational efficiency.
- Assisted in migrating internal workflows from third-party platforms to the Microsoft ecosystem, reducing recurring SaaS platform costs by approximately 25% through migration to Microsoft ecosystem.

Software Developer (Backend Lead Responsibilities)
Smart Works International
08/2022 - Present

- Led backend/API development for a Revenue Cycle Management (RCM) platform serving US-based healthcare providers.
- Designed overall system architecture and database ERD to support scalable billing, collections, and reporting workflows.
- Architected and implemented RESTful APIs using Node.js (Express/Nest) and PostgreSQL to handle financial and operational data processing.
- Led the modernization of the deployment process by introducing containerization and automated CI/CD pipelines for backend and frontend services. Reduced deployment duration by over 85%, from manual SSH-based releases requiring 100–150 minutes across client environments to a centralized 15-minute automated deployment, while increasing reliability and reducing deployment risk.
- Built and deployed Synapse Workspace, an internal work-tracking platform for employees, replacing spreadsheet-based workflows and reducing manual reporting effort by approximately 40% while improving operational visibility.
- Implemented structured reporting features to collect real-time productivity and compliance data, enhancing operational visibility.
- Managed production environments via SSH and ensured stable deployments with minimal downtime.

Skills

Backend & APIs

- Node JS | JavaScript | TypeScript
- Express JS
- Nest JS
- REST APIs
- JWT Authentication
- WebSockets

Databases & Data Engineering

- PostgreSQL
- MongoDB
- Redis
- BigQuery
- ETL Development
- Query Optimization
- Schema Design

Architecture & DevOps

- System Architecture Design
- Database ERD Planning
- Docker
- CI/CD Pipelines (Bitbucket, GitLab)
- Linux
- NGINX
- SSH

Cloud & Infrastructure

- AWS Fundamentals (EC2, S3)
- DigitalOcean (Droplets, Spaces)

Frontend

- Next.JS, React
- Nuxt.JS, Vue

Frontend Software Engineer Intern
InnoVantage, Inc.
11/2021 - 05/2022

- Built the frontend of a procurement automation platform using JavaScript and Nuxt.js, managing global application state with Vuex.
- Translated Figma designs into responsive, production-ready web components that matched the original designs.
- Refactored large components into smaller, reusable modules, which improved maintainability and sped up feature development across the team.
- Built dynamic forms and integrated them with backend REST APIs for data submission, validation, and retrieval.
- Maintained code quality using SonarQube, resolving code smells, duplications, and maintainability issues flagged during static analysis.
- Fixed QA-reported defects ranging from minor UI issues to high-severity critical bugs, which helped keep releases stable.

Software Quality Assurance Intern
Wizy Software Labs, Inc.
08/2021 - 09/2021

- Conducted functional and regression testing for web and mobile applications, and improved coverage by migrating test cases to Qase and adding edge-case scenarios.
- Isolated bugs using browser developer tools and wrote detailed reports with reproduction steps for the development team.
- Reported low-to high-priority bugs, preventing defects from reaching production.

Education

Bachelor of Science in Computer Engineering
Polytechnic University of the Philippines

- Majored in Enterprise Software Systems
- Capstone: JuanTapp - Emergency mobile application
- Thesis: Solar Powered Water Purifier with Quality Monitoring System

Science, Technology, Engineering, and Mathematics (STEM)
Polytechnic University of the Philippines

- With Honor

Personal Projects

Utiligo

- Developed Utiligo, an innovative mobile platform designed to streamline everyday utility services through automation, real-time communication, and a seamless user experience. The project showcases end-to-end product thinking, from user-facing design to backend infrastructure and service integration.

PHL Covid19 Tracker

- Built a web application to monitor and display real-time COVID-19 case statistics in the Philippines, utilizing an open-source API for accurate and up-to-date data.

Certificates

- HIPAA Workforce Proficiency
- HIPAA Awareness for Business Associates
- HIPAA Security
- Google IT Support Professional Certificate

Language

- Filipino
- English
